dev.oscar.romero@gmail.com
ozckar07.github.io

PROFESSIONAL PROFILE

Backend developer with professional experience in PHP, Laravel and enterprise platforms. I have delivered REST APIs, domain models, transactional business rules, calculation engines, third-party integrations, asynchronous workflows and digital documents for environmental laboratories, EdTech, commerce, occupational health, communities and service companies.

PROFESSIONAL EXPERIENCE

BIG PROJECT / Backend Developer

September 2023 – Present · Remote, Ecuador

- Responsible for the development and evolution of PHP/Laravel services, REST APIs, Eloquent models and business processes for enterprise applications.
- Collaborated with frontend, administrative and operational teams and domain specialists to turn manual procedures into traceable digital workflows.
- Implemented authentication and permissions, validations, SQL transactions, third-party integrations, scheduled automation and reporting.
- Maintained legacy systems and supported integration/deployment workflows in GitLab QA and sandbox environments.

TECHNICAL SPECIALTIES

ARCHITECTURE MVC, domain separation, Services/Repositories, REST APIs, Eloquent ORM and authorization.

TRANSACTIONS Payments, invoices, memberships, inventory, validation and state traceability.

AUTOMATION Laravel Scheduler, Jobs/Queues, PDF/Excel reports, electronic PDF signing and communications.

ALGORITHMS Safe mathematical evaluation, complex business rules, Levenshtein and ROSA scoring.

AI & FRONTEND Foundational frontend skills; Figma prototypes and AI assistance for web development.

EDUCATION

Higher Technologist in Software Development

Instituto Superior Universitario Sucre
Quito · 2023

SKILLS

BACKEND
PHP 7/8 · Laravel 9–11 · MVC · REST APIs · Eloquent

DATA
MariaDB / MySQL · SQL · transactions · migrations

ARCHITECTURE
Services · Repository · business rules · validations

SECURITY
Passport / OAuth2 · roles · JWT by project

ASYNC
Jobs / Queues · Scheduler · Laravel Mail · Firebase

INTEGRATIONS
Datafast · Stripe · PayPhone · Contífico

DOCUMENTS
PDF · Excel · QR · digital PDF signatures

TOOLS
Git · GitLab · QA/CI-CD · basic Linux/SSH

TECHNICAL PROJECT EXPERIENCE

01 IPSOMARY — Environmental laboratory and consulting

2024 – Present

As a backend developer, I built and evolved an enterprise API spanning quotations, requisitions, field visits, sample collection and reception, laboratory testing, quality control and report issuance. Implemented a configurable formula engine with dependency handling and safe evaluation, including BOD, USDA soil texture, particle size and flow calculations. Developed versioned and electronically signed PDFs, bulk queued deliveries with retries, operational dashboards and token-protected financial data integration. The platform serves an organization of approximately 30 people; delivery-time improvements are team estimates, not audited metrics.

STACK Laravel 11 · PHP 8.3 · MariaDB · Passport · Eloquent · Jobs/Queues · Scheduler · DomPDF/Excel · Java/PDF signing

02 Leuca Solutions — Assessment platform

Feb 2025 – May 2026

Backend developer for a certification-exam simulation platform. Built question-bank APIs, ten assessment formats, partial-credit scoring, results, performance trends by category and learner tracking. Implemented certification access validity, purchases, reactivation, notifications and scheduled expiration. Charts were rendered by the frontend team.

STACK Laravel 10 · PHP 8.3 · Passport · Eloquent · Services/Repositories · Scheduler · Mail

03 TyG Consultorías — Occupational health and ergonomics

Nov 2024 – Sep 2025

Designed a multi-company B2B backend for assigning employee surveys, recording answers and analyzing risk. Implemented the ROSA matrix scoring method and psychosocial risk assessment, including individual and group PDF/Excel reports. The repository also includes business onboarding with PayPhone and Contífico-based invoicing.

STACK Laravel 11/PHP 8.3 · Passport · MariaDB · Repository/Service · DomPDF · Excel · PayPhone/Contífico

04 Punto Premia — Loyalty and inventory

Jun 2025 – Feb 2026

Implemented configurable loyalty points per merchant, invoice validation, balance reversals and traceable movements. Built transactional reward redemption, warehouse/island inventory, merchant accounts, scheduled promotions and PDF/Excel reporting. Redemption also triggers a queued warehouse notification.

STACK Laravel 11 · PHP 8.3 · MariaDB · Passport · SQL transactions · Scheduler · Jobs · Excel/DomPDF

05 OnePay / Coris — Payment links and reconciliation

Feb 2025 – Nov 2025

Developed backend components to issue tokenized payment links for roadside assistance and create Datafast checkout sessions. Implemented payment intents, transactions, expiry checks, remote status queries, validation, encrypted data exchanges and traceability. The reviewed code does not establish a native webhook or autonomous scheduled reconciliation.

STACK Laravel 10 · PHP 8.1+ · REST API · Datafast · HTTP Client · Eloquent

06 Ponte 11 — Football trivia and fuzzy search

Aug 2025 – Feb 2026

Contributed backend trivia rules using team, season and position history to validate multiple correct footballer answers. Implemented typo-tolerant search with name normalization, Levenshtein, SOUNDEX and n-grams. The repository includes four game modes, seasonal rankings and Excel imports; my individual contribution to every module has not been established.

STACK Laravel 11 · PHP 8.3 · MariaDB · Similarity algorithms · SQL · PhpSpreadsheet

07 Montessori Certifications — Verifiable certificates

Jun 2025 – Aug 2025

Built the backend for English certificates: student management, four scores (reading, writing, speaking and listening), averages, annual serial numbers and public verification tokens. Implemented Passport-protected APIs, PDF generation and regeneration with DomPDF and QR code creation with BaconQrCode. QR rendering inside the PDF still requires runtime validation.

STACK Laravel 11 · PHP 8.3 · Passport · DomPDF · BaconQrCode · Eloquent

08 Legal case system — Trademark registration

Sep 2025 – Oct 2025

Contributed to a case-management backend for trademark registration. It covers client-linked cases, processing stages, milestones, deadlines, document links, internal notes, recommendations, progress tracking and PayPhone payment confirmation. Production deployment and the precise extent of my individual contribution remain unverified.

STACK Laravel 11 · PHP 8.3 · Passport · Eloquent · Enums · PayPhone · REST APIs

09 Energy 1111 — Fitness and memberships

Jun 2025 – Feb 2026

Contributed to a fitness backend with APIs for routines, training programs, nutrition plans, video progress, daily challenges and membership-based access. The code includes Stripe PaymentIntents and webhooks, along with scheduled membership reconciliation. Individual authorship of every module remains to be confirmed.

STACK Laravel 11 · PHP 8.3 · Passport · Stripe · Webhooks · Scheduler · Repositories

10 Open Closet — Social marketplace

Jun 2024 – Oct 2024

As sole backend developer, built APIs for product listings, user wardrobes/shops, social interaction, offer negotiation, purchases, reviews and REST-based chat. The repository includes media storage, social login, Firebase notifications and Stripe PaymentIntent integration; production payment processing was not verified.

STACK Laravel 10 · PHP 8.2 · MariaDB · Passport · Socialite · Spatie MediaLibrary · Stripe/Firebase

11 BiBalance — Training and nutrition

Jun 2024 – Oct 2024

As sole backend developer, created services for weekly programs, scheduled routines and diets, recipes and ingredients, macronutrient calculation, and individual video/progress tracking. Designed separate admin and client APIs with Passport authentication and membership logic. The production payment provider remains unconfirmed.

STACK Laravel 10 · PHP 8.2 · MariaDB · Passport · Eloquent · Services/Repositories

12 Agrovivienda — Residential management

Sep 2023 – Jun 2024

As sole backend developer, built APIs for owners/residents, properties, common-charge payments, receipt verification, advances and financial/occupancy dashboards. Integrated invoice issuance and lookup with FacturaYa through an API and automated monthly assessments and reminders. Estimated scope: 100–150 homes.

STACK Laravel 9 · PHP 8.1 · MariaDB · JWT · Eloquent · Excel · Scheduler

13 Pangea Delivery — Shopping-linked recipe reels

Sep 2023 – Mar 2024

Joined an existing delivery backend to build the short-video experience for recipes linked to purchasable products: engagement, views, saves, tags, filters, pagination and weighted recommendations. I did not build the core ordering, delivery logistics or payment features.

STACK Laravel 9 · PHP 8.1 · MariaDB · VideoService · REST API

14 Schoenstatt — Community platform

Oct 2024 – Apr 2025

Contributed to a community backend covering branches, cities, posts and context-sensitive access. The code includes editorial workflows, calendars, automation and YouTube video publishing with branch-specific playlists. Authorship of modules added later requires verification.

STACK Laravel 10 · PHP 8.2 · Sanctum · YouTube API · Firebase · Scheduler

15 Schoenstatt Raffles — Ticket checkout

Apr 2025 – Jun 2025

Built the backend raffle workflow for iPad: number selection, temporary reservations and expiry, Datafast checkout, purchase registration and PDF tickets with QR codes. This is separate from the community platform; concurrency guarantees should not be assumed without testing.

STACK Laravel 11 · PHP 8.3 · Datafast · Passport · DomPDF · QR · Scheduler

16 Radio San Giovanni — CMS and automation

Jul 2024 – Oct 2024

As sole backend developer, built a content API/CMS and recurring radio/TV schedules with time-slot overlap validation. Automated daily gospel and saints-calendar updates through web scraping and Scheduler, alongside articles and prayer requests.

STACK Laravel 9 · JWT · Eloquent · Scraping · Scheduler

17 Fixit — Legacy platform maintenance

Approx. 2 years

Performed corrective and evolutionary maintenance on a third-party repair-shop system. My contributions included extending CRUD forms, adjusting access and permissions, and minor frontend changes. The existing repair, reporting and notification features are not claimed as my original work.

STACK Laravel 5.6 · PHP 7.x · Blade · Eloquent · Legacy maintenance

18 FacturaYa — Deferred report delivery

Exact dates to confirm

On a pre-existing e-invoicing product, I contributed only Excel report exports and asynchronous queued processing to email the generated report to its requester. I did not develop the invoicing core or its tax integrations.

STACK PHP/Laravel 8 legacy · Excel · Jobs/Queues · Laravel Mail
